

Workshop: Valordata Feed

Get on board

Valordata Feed (VDF) is a fully structured and encoded financial data feed offering near-real time delivery of reference data. A powerful messaging system delivers fully cross referenced securities master data, award winning corporate actions and price information. Covering more than 11 millions of financial instruments, SIX Financial Information's continually expanding database is updated every 15 minutes.

About the workshop

The two-day VDF workshop is designed to help clients implementing VDF understand the philosophy behind the feed, how it is structured, generated and ultimately delivered to your back office.

Day 1

The first day focuses on the technical aspects and includes a short overview of the Financial Datamodel (FIDM), the metadata, EDIFACT, usage of schemes and symbols and the explanation of the release management. Also, you will learn about our handling of institutions and instruments.

Day 2

The second day starts with an introduction to the VDFS, the VDF delivery platform and its functionalities. Furthermore, we explain listing and pricing information as well as cash flow and corporate action handling.

A sample of real-life case studies are interjected throughout the workshop to provide participants with practical experience using the VDF data and enable them to discover the desired information.
